Chapter 12 (Principles of Pharmacology) Workbook Homework

Email * travis.boettcher@gmail.com	
Any action of a drug other than the desired one: *	2/2
Action	
Adverse effect	✓
Indication	
Contraindication	
✓ Which of the following is not one of the "nine rights" of medication administration?	*2/2
Right time	
Right patient	
Right to refuse	
Right handed	✓

✓ Which of the following is considered a relative contraindication to administration of aspirin?	*2/2
Hypersensitivity to aspirin	
Preexisting liver damage	
History of asthma	✓
History of nausea	
✓ "I think she's drunk!" a bystander yells as you and your partner arrive of the scene of an unknown medical problem. You observe an approximately 45-year-old woman stumbling between several cars in parking lot of a grocery store. As you catch up to the woman, you ask if she is diabetic. She nods clumsily and leans against one of the cars You test her blood glucose and obtain a reading of 49 mg/ dL. What should you do?	the her
Administer glucose gel orally.	✓
Contact the medical control for further instructions.	
Restrain her onto the gurney and insert a nasopharyngeal airway.	
Wait for an ALS response so that glucose and be administered intravenous	sly.
Oxygen is a catalyst for combustion. *	2/2
1. True	✓
2. False	

Oral glucose may be administered to an unconscious patient in order to save his or her life.	* 2/2
1. True	
2. False	✓
✓ Gelatin shells filled with powdered or liquid medication: *	2/2
O Topical medications	
Capsules	✓
Action	
Adverse effect	
A medication is a chemical substance that is used to treat or prevent disease or relieve pain.	*2/2
1. True	✓
2. False	
✓ Nitroglycerin decreases blood pressure. *	2/2
1. True	✓
2. False	

Reasons or conditions for which a medication is given: *	2/2
AbsorptionIndication	✓
Action	
Contraindication	
✓ Naloxone should be administered in a full dose to a single nostril. *	2/2
1. False	✓
2. True	
✓ You are called to the beach for a 15-year-old boy who is having trouble breathing. He tells you between gasps that he was stung by something and that his body feels "swollen." Just then, his mother runs up to you and puts an EpiPen into your hand. "Here," she says breathlessly. "This is his EpiPen. He needs this!" Would you administer epinephrine to this patient?	*2/2
No. His signs and symptoms contraindicate an epinephrine injection.	
Yes. Use the sublingual route.	
Yes. Push the EpiPen firmly against the patient's thigh for several seconds.	✓
No. The EpiPen will make his condition worse.	

✓	The amount of medication given: *	2/2
0	Capsules	
0	Action	
•	Dose	✓
0	Absorption	
~	The government publication listing all drugs in the United States is called the:	*2/2
•	United States Pharmacopeia	✓
0	Nursing Drug Reference	
0	US Pharmacology	
0	Department of Transportation Reference Guide	
~	is the main hormone that controls the body's fight-or-flight response.	*2/2
0	Serotonin	
0	Adrenaline	
•	Epinephrine	✓
0	Dopamine	

✓	Which of the following is NOT a characteristic of epinephrine? *	2/2
0	Increasing the heart rate and blood pressure	
0	Dilating passages in the lungs	
•	Secreted naturally by the pituitary gland	✓
0	Dilating blood vessels	
~	Outside a hospital, a(n) is the preferred method of giving oxygen to patients who are experiencing significant respiratory distress.	*2/2
•	Nonrebreathing mask	✓
0	Endotracheal tube	
0	Nasal cannula	
0	Bag-mask device	
~	Lotions, creams, ointments: *	2/2
0	Contraindications	
0	Action	
0	Absorption	
•	Topical medicantions	✓

✓ Intended therapeutic effect that a drug is supposed to have: *	2/2
Pharmacology	
O Does	
Absorption	
Action	✓
✓ Which medication commonly comes in gel form? *	2/2
Glucose	✓
Naxolone	
Activated charcoal	
Epinephrine	
✓ Parenteral medications enter the body through the digestive tract.	.* 2/2
1. True	
2. False	✓

✓ The most common technique for naloxone administration is	via the: * 2/2
Intranasal route	~
O Intramuscular route	
O Intravenous route	
Oral route	
are the effects that are undesirable but pose little patient.	risk to the *0/2
Side effects	×
Unintended effects	
Adverse effects	
Special effects	
✓ Nitroglycerin is usually taken *	2/2
Orally	
Intramuscularly	
Intravenously	
Sublingually	✓

 Action Contraindication Absorption ✓ Nitroglycerin relieves the squeezing or crushing pain associated with angina by: Dilating the arteries to increase the oxygen supply to the heart muscle Causing the heart to contract harder and increase cardiac output Causing the heart to beat faster and more efficiently Causing the heart to beat faster to supply more oxygen to the heart ✓ A situation in which a drug should not be given: * 2/2 Contraindication Adverse effect Action Indication 	✓	The process by which medications travel through body tissues until they reach the bloodstream:	*2/2
 Absorption Indication Nitroglycerin relieves the squeezing or crushing pain associated with angina by: Dilating the arteries to increase the oxygen supply to the heart muscle Causing the heart to contract harder and increase cardiac output Causing the heart to beat faster and more efficiently Causing the heart to beat faster to supply more oxygen to the heart A situation in which a drug should not be given: * 2/2 Contraindication Adverse effect Action 	0	Action

×	Nitroglycerin relieves pain because its purpose is to increase blood flow by relieving the spasms or causing the arteries to: Constrict	*0/2
X	Nitroglycerin relieves pain because its purpose is to increase blood flow by relieving the spasms or causing the arteries to: Constrict Dilate	*0/2

•	Metered-dose inhalers are often used with a spacer. *	2/2
	1. False	
	2. True	✓
•	✓ You are dispatched to the county fair for a 54-year-old woman complaining of chest pain. You arrive to find her pressing on the center of her chest and note that she has pale, clammy skin. You ask if she has any cardiac history, and she tells you, "No, I just have arthritis, and my doctor says that I am prediabetic." Her vital signs are: pulse 112 beats/minute, respiratory rate 18 breaths/minute, blood pressure 94/62 mm Hg, and oxygen saturation 99% on room air. Would you give this patient aspirin?	
	Yes. Her signs and symptoms indicate a cardiac problem, and aspirin could help.	✓
	No. Nitroglycerin would be more appropriate.	
	Yes. Its analgesic properties may help with the discomfort.	
	No. Aspirin is contraindicated for arthritis.	
•	✓ Nitroglycerin should be administered only when the patient's systolic blood pressure is above 100 mm Hg.	*2/2
	1. True	✓
	2. False	

is a simple sugar that is readily absorbed by the bloodstream. *	2/2
Sucralose	
Glucose	✓
Lactose	
Fructose	
✓ Insufficient oxygen in the cells and tissues is called hypoxia. *	2/2
1. False	
2. True

Oral	2/2
Oral Intramuscular	2/2

✓	The science of drugs and their ingredients, uses, and actions: *	2/2
0	Adverse effect	
0	Action	
•	Pharmacology	✓
0	Dose	
/	What medication is commonly administered in a metered-dose inhaler (MDI)?	*2/2
0	Naloxone	
0	Nitroglycerine	
•	Albuterol	~
0	Activated charcoal	
~	You are called to a home of a 34-year-old male who is unresponsive. When you arrive, you find the patient supine and unconscious on the living room floor, with snoring respirations. Which of the following medications might be useful in this situation?	*2/2
0	Nitroglycerin	
•	Naloxone	✓
0	Albuterol	
0	Aspirin	

×	Which of the following is taken into consideration when determining the dose of a medicine?	*0/2
0	Ability to swallow	
0	Sex	
•	Occupation	×
0	Age	
✓	There are only seven routes of medication administration. *	2/2
1. F 2. T	alse rue	~
✓	You and your partner are dispatched to a home on the east side of town for a possible heart attack. On arrival, you are met by a distressed wife who says her husband began having chest pain while mowing the lawn. After obtaining the patient's vital signs, you begin to take a SAMPLE history. When you ask about medications, the patient begins listing off all of the medications he has been prescribed by his doctor. Nitroglycerin would be contraindicated if the patient was currently taking which of the following medications?	*2/2
0	Albuterol	
0	Aspirin	
0	Oxygen	
•	Sildenafil	✓

✓ Your patient is a 73-year-old man who complains of severe chest pressure with trouble breathing while having dinner at a local diner. He has a small vial of nitroglycerin in his pocket but says that he has not taken any in several days and needs you to help him to get the vial open. After administering oxygen, what is the first thing that you should do?	
Place him in the recovery position.	
Check his blood glucose level.	
Begin assessing the patient's ventilations.	
Obtain the patient's blood pressure and ensure that his systolic pressure is not below 100 mm Hg.	
✓ Nitroglycerin should be given to someone with low blood pressure. * 2/2	
1. True	
2. False	
✓ Which of the following routes of administration involves medication being *2/2 absorbed in the fat tissue between the skin and muscle?	
Intranasal	
Intramuscular	
Subcutaneous	
O Intravenous	

✓ Which of the following statements about oxygen is FALSE? *	2/2
The nonrebreathing mask is the preferred route of administration for shock	
It should be administered to all patients	✓
It is not safe to use around open flames	
It is the most commonly administered medication in the prehospital setting	
Epinephrine is a hormone produced by the pancreas. *	2/2
1. True	
2. False	✓
